

New Strike Made in the Smoky Valley

vein and his assays from two holes, taken as an average, show values of \$103 gold and \$2.55 in silver, and \$106 gold and \$2.90 silver, respectively. These are about the same values which have been secured by Frenzel. The new district is in a section which has hitherto been little prospected, and is about twelve miles southeast of Millett's station.

Mr. Scallon is elated over his new find. By the way, he says that the new owners of the old Jefferson mine are rushing things, and that besides the men employed in the mine, a force of about thirty men is at work constructing the new mill and other buildings. The supplies are being hauled in from Austin.

The rock brought in by Mr. Scallon is an oxidized porphyry, shot with seams of white quartz, and the metal content appearing to be in the form of chlorides of gold and silver.

TONOPAH NEVADA

The bindery of the Bonanza is turning out the best work in the city, and it is giving such great satisfaction that anyone who has his work done there once, never goes anywhere else. The plant is the finest and most complete, not only in the State, but this side of San Francisco. We can turn out all kinds of work that is demanded in the offices of lawyers, brokers, promoters, mining companies, or for any other kind of business, and we guarantee satisfaction in every respect. One trial will be sufficient to establish the truth of this statement. It pays to go where only the best kind of work is done, and it pays to patronize home industry.

Everything for a dainty tea table will be found among the hand painted china at St. Mark's Bazaar, Monday evening, December 14.

It is not often that an opportunity presents itself when home made candies, stuffed and salted almonds can be bought. Make the most of it at St. Mark's Bazaar, Monday, December 14.

of the most significant and anxious epochs in Nevada mining history was inaugurated Friday on the smelting stock when the last gallon of water was pumped out of the old 300-foot shaft, leaving the sump at the 25-foot level dry if not high and again bringing within reach that wonderful body of ore that enriched May, Flood, Fair and O'Brien in the thalycron "palmy days" of the meter lode.

The feat, which heretofore, has baffled the engineers, is in itself a triumph of modern science against the forces of nature. For years, since 1882, when the encroaching water conquered against the combined suction of 16 old-style Cornish pumps and forced the abandonment of the shaft, work in the depths of the mine has been impossible and the water has gradually risen and filled the deep hole. The Knowledge Blue pump after a long siege of continuous working, has finally reduced this immense well of water and is now easily able to handle the flow which in the years past has been the victor.

With this pump holding the master and, it is now possible to handle the water at the 2500 level and extract the good ore there; and to sink further to the 2800 level where the rich ore bodies of the early days were abandoned by the bonanza kings on account of the flow from above.

The effect of this announcement on the Comstock has been as electrifying as that of an immense strike of new ore for the old lead has long been considered lost to mortals—reclaimed by a jealous nature whose agencies had outstripped the ingenuity of avaricious man. The pump is regarded with almost reverential awe by the old miners who feel that at last there is a prospect of a recurrence of the Golden Age in Virginia through its use.

BOB

BOB is the new town at the Lodi mines, in the Northwest corner of Nye Counuy, 45 miles from Luning

Bob Is Situated in the Center of a highly Mineralized Country

LODI MINES AND SURROUNDING COUNTRY
NYE COUNTY, NEVADA

The Lodi Mines Company is building a smelter of 100 tons daily capacity at the town, and has \$2,000,000 worth of ore developed in its mines. This smelter will treat custom ores from the surrounding camps. The Lodi Mines Company and the Bob Towne Company are laying a pipe line from Marble Canyon which will supply pure water for the town at a reasonable cost. The pipe line will be completed within thirty days.

The Lodi Mines Company has a monthly pay roll of \$6,000, which will be doubled within a month and this money will be spent at Boß, which is the only town within thirty-five miles of the mine and smelter. All of the material for the smelter is on the ground and the construction work is under the direction of E. J. Rogers, who built the Omaha and Grant smelter at Denver. The plant will be completed within three months and before the end of next year a second 100-ton furnace is to be installed.

The Lodi Mines Company will lease a portion of its estate and treat leasers' ore at the smelter. The black sands of the lone placers and ores from the Downeyville mines will be treated at Lodi, as well as the output from a number of other properties.
